# WEB TECHNOLOGIES

## Install Express JS

---

- Express is a **web application framework** for Node.
- It is **server side or back end framework** not comparable to client side frameworks like React, Angular but can be used in combination to build full stack applications.
- Express is **fast, unopinionated** and **minimalist** web framework for Node.js
- Web frameworks aim to automate the overhead associated with common activities performed in [web development](#). For example, many web frameworks provide [libraries](#) for [database](#) access, [templating](#) frameworks, and [session](#) management, and they often promote [code reuse](#)

# WEB TECHNOLOGIES

## Install Express JS

---

### Why Express

- In pure node JS, we have to write everything on our own.
- Every logic, parsing routes, passing URLs and creating routing actions, rendering everything has to be written by ourselves. That is error prone.
- We should focus on business logic not repetitive tasks.

# WEB TECHNOLOGIES

## Install Express JS

---

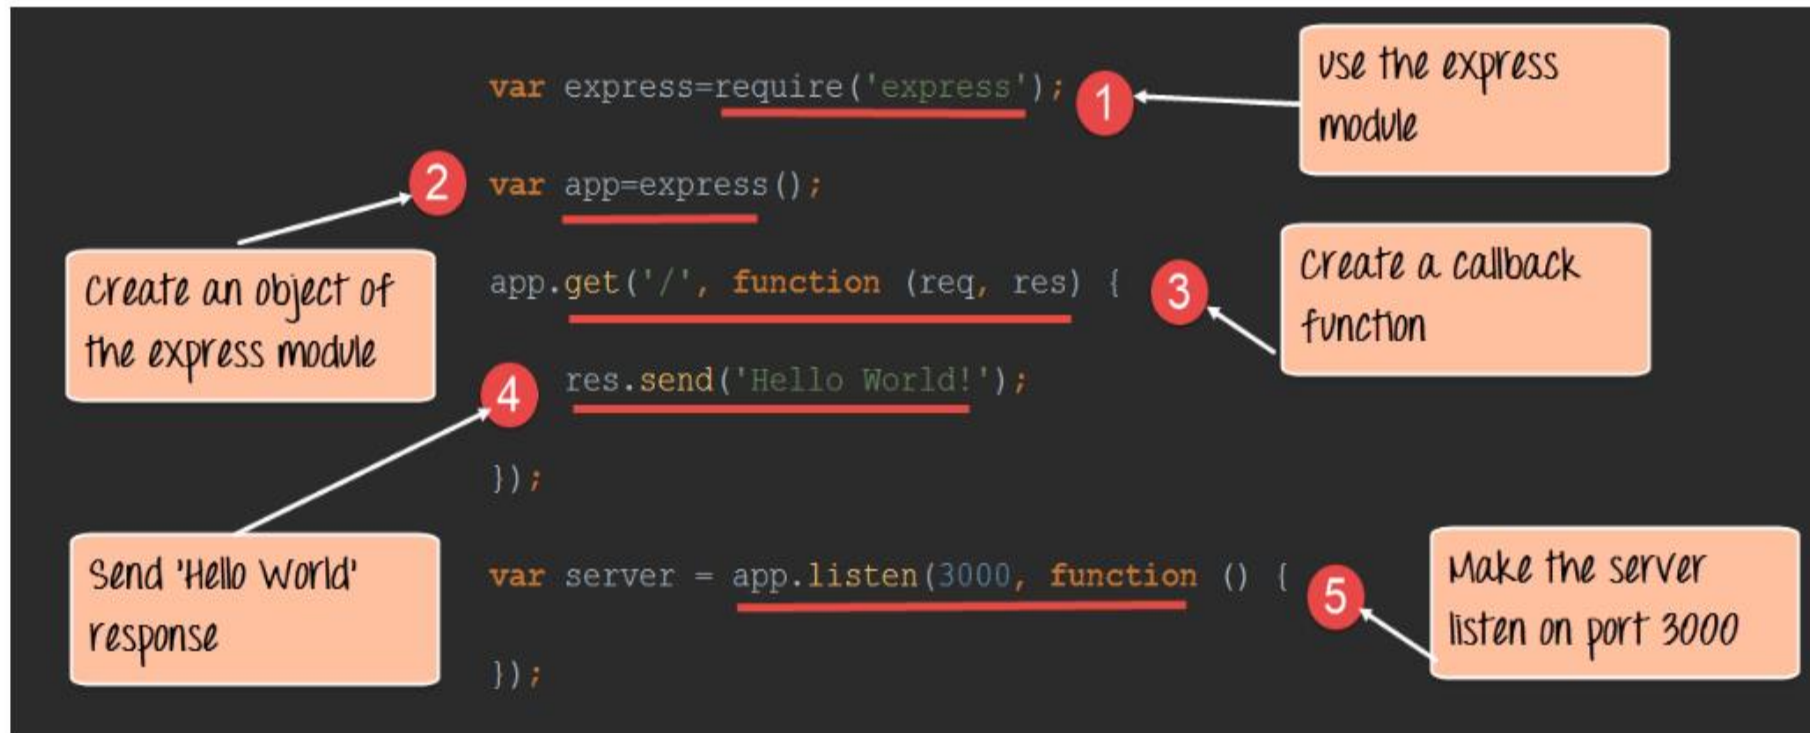

- What to know first ?
  - JS fundamentals ( Objects, Arrays, Conditions etc)
  - Basic Node.js and NPM
  - HTTP status Codes
  - JSON

# WEB TECHNOLOGIES

## Install Express JS

### Basic Server Syntax

# WEB TECHNOLOGIES

## Install Express JS

---

### Basic Route Handling

- Handling requests/route is **simple**
- **app.get(), app.post(), app.put(), app.delete()** etc.
- Access to params, querystring, url parts etc
- **Express has routers** so we can store routes in separate files and export
- We can parse incoming data with **Body Parser**.

```
app.get('/', function(req, res) {  
  // Fetch from database  
  // Load pages  
  // Return JSON  
  // Full access to request & response  
});
```

# WEB TECHNOLOGIES

## Install Express JS

---

- Prerequisite:
  - **Node.js** installed on the system.
- visit website for installation of node.js <http://nodejs.org/en>

# WEB TECHNOLOGIES

## Install Express JS

---

- Assuming you've already installed [Node.js](#).
- Create a directory to hold your application, and make that as your working directory.

Command Prompt

```
Microsoft Windows [Version 10.0.18362.836]
(c) 2019 Microsoft Corporation. All rights reserved.

C:\Users\Aisha Begum>cd express

C:\Users\Aisha Begum\express>mkdir myexpress

C:\Users\Aisha Begum\express>cd myexpress

C:\Users\Aisha Begum\express\myexpress>_
```

# WEB TECHNOLOGIES

## Install Express JS

- Use the ***npm init*** command to create a **package.json** file for your application.
- This command prompts you for a number of things, such as the name and version of your application. Hit RETURN to accept the defaults settings.
- For more information on how package.json works, see [Specifics of npm's package.json handling](#).

```
npm
C:\Users\Aisha Begum\express\myexpress>npm init
This utility will walk you through creating a package.json file.
It only covers the most common items, and tries to guess sensible defaults.

See 'npm help init' for definitive documentation on these fields
and exactly what they do.

Use 'npm install <pkg>' afterwards to install a package and
save it as a dependency in the package.json file.

Press ^C at any time to quit.
package name: (myexpress)
version: (1.0.0)
description: Myexpress demonstration
entry point: (index.js) myapp.js
test command:
git repository:
keywords:
author: aisha
license: (ISC)
About to write to C:\Users\Aisha Begum\express\myexpress\package.json:
{
  "name": "myexpress",
  "version": "1.0.0",
  "description": "Myexpress demonstration",
  "main": "myapp.js",
  "scripts": {
    "test": "echo \"Error: no test specified\" && exit 1"
  },
  "author": "aisha",
  "license": "ISC"
}
Is this OK? (yes) _
```

# WEB TECHNOLOGIES

## Install Express JS

- The *package.json* file for your application is as shown below.
- Used nodepad++ text editor

C:\Users\Aisha Begum\express\myexpress\package.json - Notepad++

File Edit Search View Encoding Language Settings Tools Macro Run Plugins Window ?

package.json

```
1 {  
2   "name": "myexpress",  
3   "version": "1.0.0",  
4   "description": "Myexpress demonstration",  
5   "main": "myapp.js",  
6   "scripts": {  
7     "test": "echo \"Error: no test specified\" && exit 1"  
8   },  
9   "author": "aisha",  
10  "license": "ISC"  
11 }  
12
```

# WEB TECHNOLOGIES

## Install Express JS

- Use the ***npm i express*** command to install express

```
package.json
1 {
2   "name": "myexpress",
3   "version": "1.0.0",
4   "description": "Myexpress demonstration",
5   "main": "myapp.js",
6   "scripts": {
7     "test": "echo \"Error: no test specified\" && exit 1"
8   },
9   "author": "aisha",
10  "license": "ISC",
11  "dependencies": {
12    "express": "^4.17.1"
13  }
14 }
15
```

```
C:\Users\Aisha Begum\express\myexpress>npm i express
npm notice created a lockfile as package-lock.json. You should commit this file.

```

# WEB TECHNOLOGIES

## Install Express JS

---

- Create a **myapp.js** file in the root folder of express.

express > myexpress

Name	Date modified	Type
node_modules	09-06-2020 11:04	File folder
myapp	09-06-2020 11:14	JavaScript File
package.json	09-06-2020 11:04	JSON File
package-lock.json	09-06-2020 11:04	JSON File

# WEB TECHNOLOGIES

## Install Express JS

First program to print hello world using express js

```
myapp.js x myapp.js x
const express = require('express');

const app = express();

app.get('/', (req, res) => {
  res.send('<h1>Hello World!</h1>');
});

const PORT = process.env.PORT || 5000;

app.listen(PORT, () => console.log(`Server started on port:${PORT}`));
```

Command Prompt - node myapp

```
C:\Users\Aisha Begum\express\myexpress>node myapp
Server started on port:5000
```

# WEB TECHNOLOGIES

## Install Express JS

---

- We can check the output on any browser by using the url: **http://localhost/5000**.

**Hello World!**

# WEB TECHNOLOGIES

## Building Application Stack

---

Express JS

- Building Application Stack

# WEB TECHNOLOGIES

## Building Application Stack

---

### Building Application Stack

- What is MERN Stack?
- A stack is the mixture of technologies used to create Web applications.
- Any web application will be made utilizing various technologies like (frameworks, libraries, databases).
- The MERN stack is a JavaScript stack that is intended to make Application Development process smoother.

# WEB TECHNOLOGIES

## Building Application Stack

---

### Building Application Stack

- Mern Stack Components:
- MERN incorporates four open-source Components
  - MongoDB,
  - Express,
  - React, and
  - Node.js.
- These components gives an end to end frameworks for developers to work with.

# WEB TECHNOLOGIES

## Building Application Stack

---

### Building Application Stack

#### Components Overview:

- **MongoDB** A document-oriented, No-SQL database used to store the application data.
- **NodeJS:** The JavaScript runtime environment. Used to run JavaScript on a machine rather than in a browser.
- **ExpressJS:** A framework layered on top of NodeJS, used to build the backend of a site using NodeJS functions and structures.
- **ReactJS:** A library created by Facebook. It is used to build UI components that create the user interface of the single page web application.

# WEB TECHNOLOGIES

## Building Application Stack

---

### Building Application Stack

- Benefits of MERN Stack
- JavaScript is the programming language utilized both for client side and server-side.
- For tech stack with different programming languages, developers need to find out how to interface them together. With the JavaScript stack, developers should be proficient in JavaScript and JSON.
- Using the MERN stack enables developers to build highly efficient web applications.

## THANK YOU
